Challenge

Following Autotrade Solutions' expansion from a small garage equipment distributor to a huge importer and distributor of all types of equipment for the automotive industry, Euro Systems were tasked with providing an IT solution to support the company's existing and planned growth.

In addition to developing Autotrade Solutions' online presence, Euro Systems installed multi-site Virtual Private Networks and dedicated software solutions to create a fully comprehensive IT infrastructure.

Approach

Following identification of the planned growth, Euro Systems worked to move the company forward with an up to date IT solution. Euro Systems provided consultancy, hardware, all software and installation of a full network to cater for the company's complex business requirements, procuring all hardware and software at a competitive price and putting a full finance solution in place.

Installation was carried out over several days during off peak hours to ensure that disruption to business was kept to a minimum.

Multiple warehouses in a number of locations were linked to ensure seamless order processing for Autotrade Solutions' customers. In addition, Autotrade Solutions' high performance systems are currently supported by Euro Systems' acclaimed network support contracts.

Results

Euro Systems worked closely with the client at all stages of analysis and installation, to ensure that each stage of the project exceeded their expectations. The project was completed on time, on budget, and without any disturbance to the business.

Euro Systems continue to be the preferred supplier for the supply, finance, installation and ongoing maintenance of any new equipment for Autotrade Solutions throughout the UK, in addition to the provision of a full Helpdesk solution for the company.

Contact Euro Systems today to see how we can work together to provide solutions to your IT and computer issues.
